Austrian Railway Industry

Austria's Railway Industry

**Products and Services for Sustainable
Mobility by Rail**

Products and Services for Sustainable Mobility by Rail

Rail-bound transport is the number one choice in many areas:

- High-speed trains connect urban areas
- Regional and commuter trains connect cities with their surrounding areas
- Trams and metros provide mobility in the city
- Freight trains provide environmentally friendly, efficient transport

The Association of the Railway Industry represents a strong and continuously growing segment of the Austrian economy. Our member companies provide innovative products and services for rail operators and their customers. The Austrian rail industry is market and technology leader in many areas and supplies its products around the world!

The strength of the railway industry is also underscored by Austria's disproportionately high presence and strong export orientation in this attractive field.

Thousands of highly qualified and motivated employees are hard at work developing environmentally friendly rail transport solutions that use as few resources as possible.

In this, close and active cooperation between industry and rail operators is a key to our success.

Members of the Association of the Railway Industry

Our member companies are technology leaders in various special fields, internationally active system integrators and medium-sized companies with high levels of expertise. A current overview can be found on the Internet at www.bahnindustrie.at.

Activities of the Association of the Railway Industry

The Association of the Railway Industry is committed to improve the conditions for all modes of rail-bound transport.

We force the harmonisation of technical standards and approval procedures. This will increase the efficiency and competitive strength of rail transport.

Targeted lobbying and public relations work as well as our commitment to the accelerated modernisation of rail infrastructure, passenger information systems and vehicles all help to improve the image and market position of future-oriented rail systems.

The Association of the Railway Industry's activities extend well beyond Austria's borders. Therefore we are connected with our European partners through the Association of the European Rail Industry (UNIFE, www.unife.org).

Our common objective is:

**Providing Competitive Railway
Systems for Increased
Rail Traffic**

Please contact us for further information on our working groups and other activities.
